

Avaya Solution Guide

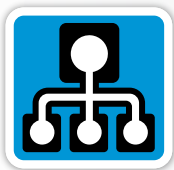

Software solutions from Dialogic, enhancing Avaya enterprises

PowerVille™ Applications

Dialogic offers a community of ready-to-deploy software applications, covering a spectrum of solutions for both enterprise and hosted deployments. Based on proven platforms, the portfolio of Dialogic applications and services can improve time-to-market, cut development costs, and reduce maintenance expenses.

Voice Mail • Video Conferencing • Audio Conferencing • Visual IVR

PowerVille™ LB – Load Balancer for Real-Time Communications

The Dialogic® PowerVille™ LB is a software-based high-performance, cloud-ready, purpose built and fully optimized network traffic load-balancer uniquely designed to meet challenges for today's demanding Real-Time Communication infrastructure in both carrier and enterprise applications.

IMG 2020 Gateway

The Dialogic® IMG 2020 Integrated Media Gateway enables interworking between IP and PSTN networks via high-density optical, telephony, and Ethernet connections in a compact 1U form factor. It transforms media and signaling to support efficient

and reliable voice, fax and multimedia sessions for mobile and cloud-based applications. The IMG 2020 secures sessions across IP and mixed network boundaries in support of service level agreements.

Dialogic® Brooktrout® SR140 Fax Software

Brooktrout® SR140 Fax Software

Dialogic® Brooktrout® SR140 Fax Software, a host-based Fax over IP (FoIP) engine, brings the power of industry-leading Dialogic® Brooktrout® fax hardware products to software-based solutions.

Brooktrout SR140 enables partners to focus on increasing the value of their document management and business process automation solutions while maintaining regulatory compliance with directives such as Sarbanes Oxley, HIPAA, and Basel II. A software-based solution also can make it easier to move toward virtualized or cloud-based architectures, and create highly available and scalable platforms or services.
